

## Shop Update (2.2 to 2.3):

- \* This update will be workable if the installed version is 2.2.
- \* Make sure your php version is 7.x
- \* Make sure to back up your script and sql before the updating process.

### *From Admin Panel:*

1. Log in to the admin panel with main admin.
2. Go to the update section.
3. Follow the instruction to update your script

### *Manually:*

1. Log in to your cPanel. Open File Manager.
2. Open the folder where your running script is located.
3. Upload the **update.zip** file from updates/2.2 to 2.3/  
which is downloaded from CodeCanyon to your server where your script is running.
4. Extract the zip in the root directory of the running script. Example: if yours script is located in the public\_html/shop in the server. Then, public\_html/shop is the root directory.
5. After extraction some files will be replaced, added or overwritten. And you should see a **update.sql** file
6. Go to PhpMyAdmin and open the database of your running script.
7. Make back up of your sql and import the **update.sql** file in your database.
8. Make sure to delete the **update.zip** and **update.sql** after the update process is completed.
